

What Do We Do?

Each detail is an in depth level of cleaning/detailing. A quick overview of what the procedures are :-

Pressure Washer Rinse

Snow Foam (Works on heavy dirt)

Clean Engine Bay

Pressure Washer Rinse

Wash Vehicle (Using Lambs Wool Mitt)

Clay Paint (Remove paint contaminants)

Snow Foam

Pressure Washer Rinse & Dry Vehicle

Measure Paint Depth with Paint Thickness Gauge

Machine Polish (Various Pads/Compounds)

Wash & Rinse Vehicle

Dry With Vehicle Towel & Air Blower

Polish Paint

Protect Paint With Quality Carnuba Wax

Clean & Seal Alloy Wheels

Dress & Protect Tyres & Plastics

Dress & Protect Engine Plastics

Basic Interior Valeting :-

Vacuum

Clean Windows In & Out

Interior Wipe Down

What Does It Cost?

A medium sized vehicle starts at **£150** up to 12 hours work, there will be a charge of **£10/hour** for each additional hour.

Luxury/large and 4x4 vehicle details start at **£180** up to 16 hours work and **£10/hour** there after.

All times are estimates as every vehicle is different due to condition and hardness of paint.

Basic interior valeting can be added to the detail for an additional charge. This would usually add an hour to the detail.

Work is currently carried out in Llandudno, but can be done at another location (additional cost) if water/power is provided. Detailing at present is only done during the weekend.

The detail is also weather dependant (if at other location) unless an inside area is available. Call/email me to discuss your requirements.

What Is Vehicle Detailing?

Car Detailing is an extremely thorough cleaning, polishing and waxing of a vehicle, to produce a showroom quality level of detail.

There are three main areas to a detail. These are :-

Cleaning- Polishing -Protecting

Cleaning refers to removing all foreign objects from the external surfaces of the vehicle. This can't be done just through 'basic' washing. Using Clay can remove unseen contaminants from the paint surface to leave clean paint ready for correction/protection.

An example of what can be removed from the paint of a vehicle...

Correcting is bringing the paint back to how it should look before being damaged by poor washing and contaminants. This is done by mechanical polisher. This removes a fine layer from the vehicle to remove fine scratches and swirls from the paint surface. The paint is measured using a Paint Thickness Gauge to check the amount of paint that can be worked.

The difference between corrected and uncorrected paint

Swirls in the paint from incorrect washing technique. This is what needs working to correct the paint. Look at your paint under Petrol Station lights or bright sun to see the swirls and scratches.

It can then go from this...

To this... A high shine and deeper colour to the car

I can also do standard washes and extras. **This isn't your usual roadside hand carwash.** I still wash it in the same manner that my full detail has, just without the clay (unless selected) and machine polishing. I use a Lambs Wool Mitt, drying towel and air blower all to prevent scratches.

Car Wash (incl. Snow Foam) **£12.00**

Car Wash (incl. Snow Foam) & Polish **£15.00**

Car Wash (incl. Snow Foam), Polish & Seal **£20.00**

Car Wash (incl. Snow Foam), Clay, Polish & Seal **£30.00**
(This is our most popular)
